

Activating Collective Intelligence

From isolated expertise to an intelligent knowledge ecosystem.

The Iceberg of Lost Time

Modern squads move fast, but knowledge discovery remains static, manual, and painfully slow.

The Expertise Discovery Gap

Inside the organization, deep domain experts, architecture specialists, and historical system owners exist—but their knowledge is distributed, invisible, and hard to access.

The Context Gap

Knowledge stays trapped inside private chats or outdated documentation. Repeated questions are asked by multiple teams.

The Motivation Gap

Knowledge sharing is voluntary and invisible. Experts prioritize their own sprint commitments because there is no reputation system or recognition for helping teams.

The Compounding Cost of Inaction

If we continue with the current model, intellectual capital remains untapped.
Only a small fraction of previous knowledge is ever reused.

Slower onboarding
for new engineers.

Duplicated
investigation effort
across isolated squads.

Architectural
inconsistencies and
repeated mistakes.

Delayed project
delivery.

Organizations unknowingly
lose **thousands of
productive hours** annually.

Introducing OCBC BrainTrust

An AI-first collective intelligence platform. Ask once. Learn **forever**.

The Knowledge Ecosystem

Turning individual knowledge into organizational capability.

The Paradigm Shift

Moving from transactional workflows to a community-driven experience

STATUS QUO	BRAINTRUST FUTURE
Process-driven and transactional	Community-driven and experiential
Static, scattered knowledge (Duplicate Confluence)	AI-curated Knowledge Base (Auto-suggests relevant threads)
No collaboration features	Interactive Challenge Forum (Crowdsource solutions)
Hard to find experts or context	Expert Discovery Engine (Identifies internal SMEs)
Low engagement	Gamified Participation (Earn badges like Expert, Mentor, Superhero)

Contextual Intelligence Where Work Happens

Knowledge is only useful if it arrives at the moment of friction.
Project Soulmate acts as a proactive work companion.

Making Invisible Expertise Visible

Creating a transparent knowledge network where sharing is recognized, rewarded, and easily discoverable.

Impact: Employees become recognized domain leaders.

Built on Proven Infrastructure

We minimize implementation risk by layering OCBC BrainTrust directly onto our existing enterprise architecture and data lakes.

AI Risk Mitigation Diagnostic

Enterprise-grade safety nets ensure accuracy, privacy, and continuous alignment.

Organizational Impact and ROI

Transforming how knowledge flows drives measurable business business outcomes across four dimensions.

Efficiency

Engineering productivity surges as the non-productive loop is eliminated.

Slower onboarding is accelerated.

Cost

Thousands of previously lost productive hours are recovered annually.

Duplicated effort ceases.

Risk

Architecture consistency improves.
Solutions are standardized rather than hidden in private chats.

Growth

Innovation sharing accelerates.

The organization shifts from static silos to a dynamic, self-learning ecosystem.

The Intelligent Organization

OCBC BrainTrust succeeds by aligning technology with human behavior, continuously recycling individual contributions into institutional memory.

The Expertise Already Exists.

The challenge is not creating knowledge—it is activating it.

“When knowledge flows freely, teams move faster, innovation accelerates, and employees feel valued. The organization becomes exponentially smarter.”
